

for Secure Access Control Systems

**OGD** have been installing access control systems across the South East since 1989, in which time we have sorted and installed the best and most reliable systems available.

We install all types of systems including automatic gates, both swing and sliding, barriers & bollards, using both hydraulic and electromechanical motors, and with our experience we can advise you, which will be the best system to meet your requirements.

We can have a full range of access control systems, including underground exit and entry induction loops, card and coin, intercoms, hand transmitters, digital entry pads to name a few. We can install Video entry systems both black & white and colour, as well as CCTV and intruder access aware systems.

The knowledge we have gained over the years allows you to rest assured that we have the quality and range of products to meet all your requirements.

We only use equipment that is built to the highest standards of quality and reliability that we can install with full confidence, and that you will have a system that is not only backed up by OGD but also have a manufacturer supporting both us, and you, our client.

Since 1989 our installations have included;

- Fire & Rescue Stations
- Southern Gas Networks Depots
- Local Authority premises & parking areas
- Local authority traffic controlling schemes
- Schools
- Air Port supply Depots
- High Security yards
- Churches
- Underground Parking Areas
- Property Managing Agents across the South East
- And many Commercial & Private clients.

Our back up service is the envy of our competitors and includes a full annual check and service if required, a service we carry out for many clients, including managing agents as well as the above-mentioned organisations.

We are also happy to take on service contracts for equipment we have not installed.

OGD are qualified electricians both NICEIC and JIB registered, which gives you the confidence that your installation will not only be safe and reliable, but it will give you the assurance that all the work confirms with part P regulations, and also conforms to the 16th edition regulations.
